Proposed Solution

S.No.	Parameter	Description
1	Problem Statement	Standard laptop requests are raised, approved and fulfilled manually through emails, spreadsheets and repeated follow-ups. This causes delays, duplicate or incomplete requests, inconsistent approvals and little visibility into order status for employees, managers and the IT procurement team.
2	Idea / Solution description	Automate the standard laptop order process using ServiceNow Flow Designer. An employee submits a request from a catalog item; the flow validates the request, routes it for manager and budget approval, creates the procurement task and purchase order, notifies the requester at every stage and closes the request once the laptop is delivered and assigned.
3	Novelty / Uniqueness	A no-code, rule-based flow that handles only pre-approved standard laptop models, so routine orders need no manual handling. Approval routing, notifications and status tracking are built into one workflow on the existing platform, with no separate tools or custom development.
4	Social Impact / Customer Satisfaction	Employees receive equipment faster and can track their request without chasing the IT team. Managers approve in one click, and IT staff spend less time on repetitive paperwork and more on support work. Clear, consistent handling improves trust in the IT service.

S.No.	Parameter	Description
5	Business Model (Revenue Model)	Internal service model. Savings come from less manual effort, fewer ordering errors, and bulk purchasing of standard models. The solution can also be offered to other organizations as a reusable ServiceNow configuration package with implementation support and a subscription-based maintenance plan.
6	Scalability of the Solution	The flow is configurable, so new laptop models, approval levels, departments and locations can be added without rebuilding it. The same design can be extended to other standard hardware such as monitors, phones and accessories, and to multiple business units or vendors.
