

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Team ID: 6ab7efd38c7c66e706728f94 | Date: 30 September 2026 | Team Lead: NAVINA K

SCENARIO
An employee requests a standard laptop; Flow Designer automatically validates, approves, orders, tracks and closes the request without manual procurement effort.

Role	Name
Team Lead	NAVINA K
Team Member	R Aakash
Team Member	A Mahalakshmi
Team Member	Maheswaran S
Team Member	Sabarinathan

	1. Request Employee raises a laptop need	2. Approve Eligibility and manager approval	3. Order Automated purchase via Flow Designer	4. Deliver Fulfilment and hand-over	5. Close & Improve Confirmation and feedback
Steps What the employee and IT experience	Opens the service catalog and selects "Standard Laptop"; fills in a short request form.	Flow checks entitlement and routes the request to the reporting manager for approval.	Approved request triggers a purchase order to the preferred vendor; inventory is checked first.	Vendor ships the device; IT receives, asset-tags and configures it, then hands it over.	Request auto-closes on receipt; employee is asked to rate the experience.
Interactions Touchpoints, places and people	Service portal (web/mobile); employee, ServiceNow catalog.	Email and portal notifications; manager, Flow Designer approval action.	Vendor system / procurement module; procurement team, finance.	IT store room, courier, service desk; asset team and employee.	Portal survey and email; employee, service desk lead.
Goals & motivations "Help me..." at each step	Help me ask for a laptop quickly without filling long forms.	Help me get an approval decision without chasing anyone.	Help me avoid manual purchase orders and duplicate entries.	Help me receive a ready-to-use laptop on the promised date.	Help me confirm delivery and share feedback easily.
Positive moments What works well	Simple catalog item with pre-filled defaults for standard models.	Automatic routing removes the need to identify the right approver.	Purchase order is created instantly with no re-typing of specs.	Real-time status updates keep the employee informed.	Automatic closure and reminders reduce follow-up effort.
Negative moments Pain points today	Employees are unsure which model or form to choose.	Approvals stall when the manager is away or unaware.	Vendor stock delays or price changes need manual handling.	Delivery date slips with no proactive notice; setup takes time.	Feedback requests are ignored; issues are found late.
Areas of opportunity How might we improve each step?	Show role-based laptop recommendations and a shorter form.	Add auto-reminders and delegate/escalation rules in the flow.	Integrate vendor stock and pricing checks into the flow.	Send proactive delivery alerts and pre-stage device images.	Use one-click feedback and track cycle time on a dashboard.
